EDUCATION

SRMIST – Kattankulathur, Chennai

2024 – 2028

B.Tech in Computer Science and Engineering | CGPA: 9.4

EXPERIENCE

NMDC Limited (Govt. PSU – India's largest iron-ore producer)

May 2026 – Jul 2026

Software Development Intern | On-site, Hyderabad

- Sole developer of a production-deployed **Event Management & Reporting System** that eliminated a workflow where event records went untracked for 2–3 weeks; actively used across mining sites in Chhattisgarh, Karnataka, and Madhya Pradesh.
- Architected full stack solo — **ASP.NET Core Razor Pages, Entity Framework Core, SQL Server** — with dual role tiers (Admin/Operator), BCrypt hashing, cookie auth, and account logout after 5 failed attempts.
- Built append-only **audit trail** logging every user action with IP, timestamp, and role — RTI-compliant, tamper-resistant, government-grade accountability.
- Integrated **SignalR** for live admin dashboard; field event submissions surface to regional admins in real time with zero page refresh.
- Engineered secure file pipeline with **magic-byte validation, EXIF stripping**, and thumbnail generation (SixLabors.ImageSharp); supports video uploads up to 500 MB with client-side progress bars.
- Delivered **QuestPDF** per-site reports, full IIS deployment config (compression, security headers, /health endpoint), and complete IT handover documentation — shipped end-to-end in **5 weeks**.

Literary Society, SRMIST

Sep 2025 – Present

Secretary to Convenor

- Led inter-university outreach to institutions including Anna University; produced written and social media content across 4 major events (Milan, Jhalak).

PROJECTS

Pet Adoption & Care Management System | Next.js, TypeScript, MySQL, Tailwind CSS, Recharts | **O Grade – Highest**

- Built a full-stack shelter management platform; schema normalised to **BCNF/4NF/5NF** across 7 tables covering pets, adoptions, foster care, medical records, and vaccinations.
- Implemented **database triggers** (adoption approval auto-updates pet status), **views** for analytics, and cursor-based stored procedures — demonstrated live at DBMS course defense.
- Exposed a complete **REST API** via Next.js App Router with 4-tier role-based access (Admin, Vet, Coordinator, Caretaker); live analytics dashboard powered by Recharts.

Football Player Impact Rating System | Python, Scikit-learn, Pandas, NumPy, Matplotlib

- Designed a **6-metric composite scoring engine** (PPI, DAQ, CCC, BRS, PII, TGI) to quantify contributions across all positions — measuring pressing, retention, chance creation beyond goals and assists.
- Engineered **position-specific normalisation**: MinMax for bounded 0–100 human-readable scores, StandardScaler for clustering geometry — ensuring a CB's rating competes only within the CB pool.
- Applied **K-Means over DBSCAN** deliberately: outlier players (a CB carrying like a midfielder) are the most valuable scouting targets, not noise; produced interpretable **player cards** with full archetype labels.

MeterDown – Premium Ride Aggregator | Java, Java Swing, SQLite, Google Maps API, JFreeChart

- Built a full-stack Java Swing desktop app aggregating Uber, Ola, and Rapido with real-time fare comparison, Google Places autocomplete, and route visualisation on an **MVC + SQLite** backend.
- Implemented **SHA-256 hashing**, role-based auth, multi-step password recovery, admin analytics panel (JFreeChart), CSV export, Tamil language support, and dark/light theming.

OpenIris – CVD Chrome Extension | JavaScript, Chrome Extension APIs (Manifest V3), SVG | **Top 5, Hackathon**

- Built a Chrome Extension for Color Vision Deficiency using real-time **SVG feColorMatrix injection** — hardware-accelerated, zero-lag correction across all webpages; covered Protan, Deutan, Tritan, and Monochromacy profiles.

TECHNICAL SKILLS

Languages: C, C++, Java, Python, SQL, TypeScript, JavaScript

Backend: ASP.NET Core, Entity Framework Core, SignalR, FastAPI, Next.js (App Router)

Frontend: React, Tailwind CSS, Java Swing, HTML, CSS, Chrome Extension APIs (Manifest V3)

Data & ML: NumPy, Pandas, Scikit-learn, Matplotlib, Jupyter Notebook, K-Means, feature engineering

Databases: SQL Server, MySQL, SQLite, SAP HANA

Tools: Git, GitHub, IIS (Windows Server), VS Code, Linux, QuestPDF, JFreeChart, Apache HttpClient

ACHIEVEMENTS & CERTIFICATIONS

First Runner-Up – AI Creativity Contest, Lens Lumina (Futurix) · **Top 20 Nationally** – HackSummit 6.0 (Aarush) · **Round 3 Qualifier** – E-nnovate Hackathon · **Volunteer** – Old age home outreach (2025)

NPTEL: DBMS (*Elite*) · Java (*Silver*) · Coursera: ML Specialization – Andrew Ng · Udemy: DSA in C/C++ – Abdul Bari ·

HackerRank: Java, Python, R · Gold Medal: Math, Physics & GK Olympiad
